## M.Sc. NUTRITION \& DIETETICS LAB MANUAL 3rd Semester

## PREFACE TO THE FIRST EDITION

This is the first edition of Lab Manual for PG Nutrition \& Dietetics Third Semester. Hope this edition will help you during practical. This edition mainly tried to cover the whole syllabus. Some hard core instrument based topic are not present here that will be guided by responsive teachers at the time of practical.

## ACKNOWLEDGEMENT

We are really thankful to our students, teachers, and non-teaching staffs to make this effort little bit complete.

Mainly thanks to Director and Principal Sir to motivate for making this lab manual.

## Laboratory Practice Safety Rules

1. Use safety glass when dealing with fire and chemical.
2. Should use front cover clothes during biochemistry practical.
3. Always use hand wash after dissection and any type of chemical use.
4. Carefully handle needles, forceps, microscope and any other dissecting instrument.

## INDEX

| SI. No. | CONTENT | PAGE No. |
| :---: | :---: | :---: |
| NUD-395, Experiments on Biostatistics \& Computer Applications in Nutrition Unit-33, Experiments on Biostatistics Unit - $\mathbf{3 4}$ Computer Applications in Nutrition |  |  |
| NUD-396, Nutritional Survey and Advanced Food \& Nutrient Analysis Unit-35, Nutritional Survey |  |  |
| 1. | Determination of socio-economic status | 01 |
| 2. | Determination of energy requirement of sedentary persons moderate and heavy workers | 06 |
| 3. | Determination of nutritional consumption by questionnaire method | 07 |
| 4. | Study on nutritional status of the beneficiaries under National nutritional Programme | 13 |
| NUD-396, Nutritional Survey and Advanced Food \& Nutrient Analysis Unit-36, Advanced Food and Nutrient Analysis |  |  |
| 5. | Estimation of calcium in milk by using EDTA by titrimetric method | 14 |
| 6. | Estimation of iron in food | 16 |
| 7. | Estimation of Ascorbic acid in lemon | 20 |
| 8. | Estimation of food Composition | 21 |

## NUD - 395 Experiments on Biostatistics \& Computer Applications in Nutrition

## Unit - $\mathbf{3 3}$ Experiments on Biostatistics

### 33.1 Computation of mean, median and mode of grouped and ungrouped data

33.2 Data representation by, bar diagram, histogram and pie diagram
33.3 Computation of standard deviation and standard error of mean
33.4 Students t-test -a) for Independent group b) paired group
33.5 Chi square test
33.6 Computation of correlation coefficient
33.7 Computation of one-way ANOVA

## Unit - $\mathbf{3 4}$ Computer Applications in Nutrition

## 34.1 computer application in Nutrition and Dietetics

34.2 Formulation Bar diagram, Pie diagram, Line diagram from the supplied data using MS Excel.
34.3 Analysis of nutritional data using computer - use of software packages.
34.4 Use of Ms Word - data representation in tabular form, manipulation of tables
34.5 Use of Ms Excel - data tabulation, data representation by charts
34.6 Statistical analysis of data by Ms Excel
34.7 Use of Ms power point

## NUD - 396 Nutritional Survey and Advanced Food \& Nutrient Analysis

$$
\text { Unit - } 35 \text { Nutritional Survey }
$$

## 1. Determination of socio-economic status:

Socio economic status (SES) refers to an individual's position within a hierarchical social structure, which is one of the important determinants of health status. Composite scales are generally used to measure the SES, which has a combination of social and economic variables. There is no direct measure of the social status of an individual; therefore, an attempt had been made by many eminent researchers and social scientists in the past to formulate a composite index to measure it. Several methods or scales have been proposed for classifying different populations by socioeconomic status. Most commonly used and acceptable method is Kuppuswamy scale. 1976 and modified on 2017.

Table 1: Modified Kuppuswamy Scale, 2017

| Detailed information | Score |
| :--- | :---: |
| Education of head of the family |  |
| Profession or honours | 7 |
| Graduate or postgraduate | 6 |
| Intermediate or post high school diploma | 5 |
| High school certificate | 4 |
| Middle school certificate | 3 |
| Primary school certificate | 2 |
| Literate | 1 |
| Occupation of head of family | 10 |
| Profession | 6 |
| Semi Profession | 5 |
| Clerical, Shop-owner | 4 |
| Skilled worker | 3 |
| Semi-skilled worker | 2 |
| Unskilled worker | 1 |
| Unemployed |  |
| Monthly income of family (January 2017) | 12 |
| $>41430$ | 10 |
| $20715-41429$ | 6 |
| 15536-20714 | 4 |
| 10357-15535 | 3 |
| $6214-10356$ | 2 |
| $2092-6213$ | 1 |
| $<2091$ | Total Score |
| Socio economic class | $26-29$ |
| I Upper | $16-25$ |
| II Upper middle | $11-15$ |
| III Lower middle | $5-10$ |
| IV Upper lower | $<5$ |
| V Lower |  |

Table 2: Explanation and example of classification of education of head of the family

| Education <br> category | New name for the <br> category | Salient point | Examples |
| :--- | :--- | :--- | :--- |
| Profession or <br> honours | Post graduate or <br> professional degree | Any Post graduation, <br> Any high grade <br> professional <br> education (which <br> may directly be after <br> class XII) | M.A, M.Sc, Ph. D, <br> M Ed, MBBS, BE |
| Graduate or <br> Post graduate | Graduate degree | Any graduation <br> degree (other than <br> high grade <br> professional <br> education) | BA, B Sc, B Ed. |
| Intermediate or <br> High post <br> school diploma | High secondary school <br> certificate | Class XII pass | Class XII pass, <br> Class XII pass with <br> vocational diploma |
| School <br> certificate | Madhyamik school <br> certificate | Class X pass | Class X pass, XI <br> pass (do not <br> complete XII) |
| Middle school <br> certificate | Middle school certificate | Class VIII pass <br> Class VIII pass, <br> class IX pass. |  |
| Primary school <br> or illiterate | Literate, less than middle <br> school certificate | Literate would be as <br> per the definition <br> followed by census of <br> India that is person <br> aged $\geq 7$ years who <br> can read and write <br> with understanding in <br> any language. | Any level of literacy <br> below class VIII <br> (that is did not get <br> class VIII pass <br> certificate |
| Illiterate | Illiterate | Person aged $\geq 7$ years <br> who can not read and <br> write with <br> understanding in any <br> language | Person who can <br> only understand a <br> language |

Table 3: Explanation and examples of classification of occupation of head of the family

| Occupation <br> category | Salient points | Examples |
| :--- | :--- | :--- |
| Professionals | Decision making, formulating policies and <br> execution of policies job that need creative <br> work. Jobs involved high organizational ability <br> and control of large number of humans or jobs <br> that involve dealing with large amounts of <br> money. Most requires very high general or <br> professional education but this is not <br> compulsory. | Doctors, advocates, <br> engineers, directors, <br> managers, architect, senior <br> administrator, readers and <br> professors, newspaper <br> editors, college principles, <br> bank managers |
| Semi <br> professionals | Jobs requiring post high school education but <br> routine wise jobs. | High school teachers, <br> college lecturer, junior <br> administrator, junior <br> medical practitioners |
| Clerical, <br> Shop owner | Jobs that require some training in arithmetic <br> and probably also reading and writing. But <br> jobs that are basically repetitive in nature. <br> Arithmetic skill in context of higher arithmetic <br> skills requiring for job. | Clerk, accountant, typist, <br> elementary school teacher, <br> farm owner, shopkeeper, <br> salesman, insurance agent, <br> news journalist |
| Skilled <br> worker | Long training in complicated work. | Driver, telephone operator, <br> carpenter, mechanical <br> worker |
| Semi-skilled <br> worker | Jobs that require some training. | Factory labour, car cleaner, <br> petty shopkeeper |
| Unskilled <br> worker | No education or training required. | Domestic servant, peon, <br> watchman |
| Unemployed | Irrespective of education level. | Self explanatory |

## Observation and analysis of data:

Place of study: Saratpally, Midnapore, Paschim medinipur, West Bengal, India
Date: 12.09.2019
Name of Head of the family: Subrata Jana
Total family member: Four
Number of earning: Two
Total Income of the family: Rs. 110000.00/ Month
Education of head of the family: Engineer

Table 4: Socio economic status according to Kuppuswami scale, 2017

| Detailed information | Score |
| :--- | :---: |
| Education of head of the family |  |
| Profession or honours | 7 |
| Graduate or postgraduate |  |
| Intermediate or post high school diploma |  |
| High school certificate |  |
| Middle school certificate |  |
| Primary school certificate |  |
| Literate |  |
| Occupation of head of family |  |
| Profession |  |
| Semi Profession |  |
| Clerical, Shop-owner |  |
| Skilled worker |  |
| Semi-skilled worker |  |
| Unskilled worker |  |
| Unemployed |  |
| Monthly income of family (January 2017) |  |
| $>41430$ |  |
| 20715-41429 |  |
| 15536-20714 |  |
| 10357-15535 |  |
| $6214-10356$ |  |
| 2092-6213 |  |
| $<2091$ |  |
| Socio economic class |  |
| I Upper |  |
| II Upper middle |  |
| III Lower middle |  |
| IV Upper lower |  |
| V Lower |  |

## Interpretation:

The data is collected from a family belongs to very high Socio economic status as the total score is 29 that is consider to be an upper class.

## 2 \& 3. Determination of energy requirement of sedentary persons moderate and heavy workers.

Energy requirement of sedentary moderate and heavy workers can be determined by different methods like EER method, according to RDA and using PAL value.

## Formula of EER

| BOY AND GIRL - INFANTS AND TODDLERS |
| :---: |
| 0-3 months EER (kcal/d) $=(89 \times$ Wt [kg] - 100) +175 |
| 4-6 months $\operatorname{EER}(\mathrm{kcal} / \mathrm{d})=(89 \mathrm{x} \mathrm{Wt} \mathrm{[kg}]-100)+56$ |
| 7-12 months EER (kcal/d) $=(89 \mathrm{x} \mathrm{Wt} \mathrm{[kg]} \mathrm{-} \mathrm{100)}+22$ |
| 13-36 months EER $(\mathrm{kcal} / \mathrm{d})=(89 \mathrm{x} \mathrm{Wt} \mathrm{[kg]} \mathrm{-} \mathrm{100)})+20$ |
| BOYS 3-8 YEARS OLD |
| EER (kcal/d) $=88.5-61.9 \mathrm{x} \mathrm{Age} \mathrm{[y]}+\mathrm{PA} \times(26.7 \times \mathrm{Wt}[\mathrm{kg}]+903 \times \mathrm{Ht}[\mathrm{m}])+20$ |
| GIRLS 3-8 YEARS OLD |
| EER = 135.3-(30.8 x age [y] + PAx $\{(10.0 \mathrm{x}$ weight [kg] $)+(934 \mathrm{x}$ height [m] $)\}+20$ |
| BOYS 9-18 YEARS OLD |
| EER (kcal/d) $=88.5-61.9 \mathrm{x}$ Age [y] + PA x ( $26.7 \times \mathrm{Xtt}[\mathrm{kg}]+903 \mathrm{x} \mathrm{Ht} \mathrm{[m]})+25$ |
| GIRLS 9-18 YEARS OLD |
| EER $=135.3-(30.8 \mathrm{x}$ age [y] $)+\mathrm{PA} \mathrm{x}\{(10.0 \mathrm{x}$ weight [kg] $)+(934 \mathrm{x}$ height [m] $)\}+25$ |
| ADULTS 19 YEARS AND OLDER - MEN |
| EER $=662-(9.53 \mathrm{x}$ age [y] $)+$ PA $\mathrm{x}\{(15.91 \mathrm{x}$ weight [kg]) $+(539.6 \mathrm{x}$ height [m]) $\}$ |
| ADULTS 19 YEARS AND OLDER - WOMEN |
| EER $=354-(6.91 \times$ age [y] $)+$ PA $\mathrm{x}\{(9.36 \mathrm{x}$ weight [kg] $)+(726 \mathrm{x}$ height [m]) $\}$ |
| PREGNANCY (14-50 YEARS OLD) |
| 1st trimester EER $=$ Non-pregnant EER + 0 |
| 2nd trimester EER $=$ Non-pregnant EER +340 |
| 3rd trimester EER $=$ Non-pregnant EER +452 |
| LACTATION |
| 0-6 months postpartum EER $=$ Non-pregnant EER +330 <br> 7-12 months postpartum EER $=$ Non-pregnant EER +400 |

PA= Physical activity

| Category | PA value |
| :--- | :--- |
| PA for boys 3-18 years | 1.0 |
| Sedentary | 1.13 |
| Low active | 1.26 |
| Active | 1.42 |
| Very active | 10 |
| PA for girls 3-18 years | 1.4 |
| Sedentary | 1.6 |
| Low active | 1.9 |
| Active | 1.0 |
| Very active | 1.11 |
| PA for girls adult men | 1.25 |
| Sedentary | 1.48 |
| Low active | 1.0 |
| Active | 1.12 |
| Very active | 1.27 |
| PA for girls adult woman | 1.45 |
| Sedentary |  |
| Low active |  |
| Active |  |
| Very active |  |

## 4. Determination of nutritional consumption by questionnaire method:

A survey will be done in a community for analysis of nutritional status of a family by oral questionnaire method of diet survey.

Following format are used for the diet survey.

## SCHEDULE FOR DIET SURVEY-1

## General Information of the family

| Name of Head of Family: | Address: |
| :---: | :---: |
| Age: | Sex: |
| No. of Family Members: |  |
| Age group of Family Members: |  |
| Total income of the family: |  |
| Total earning member of the family: |  |
| Socio-economic status of the family: |  |
| Dietary pattern of the family: | Veg ( ) Non- Veg ( ) |
| Any type of food allergy is present: |  |
| Mother's nutritional status: |  |
| Timing of Initiation of Breastfeeding: |  |
| Seasonal availability of the foodstuffs: |  |
| Timing of meal intake: | $\begin{aligned} & \text { Regular } \quad(\quad) \quad \text { Irregular } \\ & ( \end{aligned}$ |
| Any type of kitchen garden is present: |  |
| Supplementary Food Received from an Anganwadi Centre (AWC) by Children Under Six Years |  |
| Mid -Day Meal Received from School by Children |  |

## Information about sanitation \& hygiene

Sources of drinking water:

Cooking facilities:

Kitchen sanitary condition:

Storage facilities:

By whom food is prepared: Family member

Worker ( )

Food bring from canteen

Waste disposal:

Toilet facilities:

Cooking utensils are washed by: Only water ( )
water with soap or detergent ( ) Hot water ( )

## SCHEDULE FOR DIET SURVEY-2

## (NUTRITIONAL REQUIREMENT OF FAMILY BY ICMR)

Name of the investigator:
Place:
Head of the family:
House hold Number:
Total ACU:

| Sl |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. |$\quad$| Name |
| :--- | :--- |

## SCHEDULE FOR DIET SURVEY-3

(Food consumption schedule by family by icmr method)

Name of the Town / Village:
Head of the Family:
Name of the respondent:

District:
House hold number:
Type of family:

| Foodstuffs | $1^{\text {st }}$ day | $2^{\text {nd }}$ day | $3^{\text {rd }}$ day | $4^{\text {th }}$ day | $5^{\text {th }}$ day | $6^{\text {th }}$ day | $7^{\text {th }}$ day | Total | Avg |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |

## SCHEDULE FOR DIET SURVEY-4

(NUTRIENT ANALYSIS SCHEDULE OF FAMILY BY ICMR METHOD)
Name of the investigator:
Place:
Head of the family:

| Sl <br> No | Foodstuffs | Amou <br> nt <br> $(\mathrm{gm})$ |  | Energy <br> (Kcal) | Carb <br> ohydr <br> ate <br> $(\mathrm{gm})$ | Protein <br> $(\mathrm{gm})$ | Fat <br> $(\mathrm{gm})$ | Vit A <br> $(\mathrm{mcg})$ | Vit C <br> $(\mathrm{mcg})$ | Iron <br> $(\mathrm{mg})$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  | Ca <br> $(\mathrm{mg})$ |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |

## SCHEDULE FOR DIET SURVEY- 5

| Nutrients | Required amount | Amount <br> consumption | Deficiency/ excess |
| :---: | :---: | :---: | :---: |
| Total energy (kcal) |  |  |  |
| Total carbohydrate <br> $(\mathrm{g})$ |  |  |  |
| Total protein (g) |  |  |  |
| Total fat (g) |  |  |  |
| Total iron (mg) |  |  |  |
| Total calcium (mg) |  |  |  |

## 5. Study on nutritional status of the beneficiaries under National nutritional Programme:

A survey will be done in an ICDS center or a primary school for analysis of nutritional status of school going or preschool children in a community

## NUD - 396

## Nutritional Survey and Advanced Food \& Nutrient Analysis

## Unit - $\mathbf{3 6}$ Advanced Food and Nutrient Analysis

## 1. Estimation of calcium in milk by using EDTA by titrimetric method Principle:

In acid base titration the end point is marked by sudden change in pH and it can be detected by an indication. Here the determination of calcium in milk is based on a complexometric titration of calcium with an aqueous solution of EDTA bind to free calcium ion in the solution and the solution become calcium free. In presence of calcium in a particular pH , the calcon shows pink or purple colour. In absence of calcium calcon shows blue colour.

## Requirements:

i. Alcoholic calcon solution
ii. $\mathrm{NaOH}-2$ Molar $(2.05 \mathrm{~g}$ of NaOH is added to 250 ml of distilled water
iii. EDTA - 0.01 Molar (Dissolve 3.723 g of EDTA in 1 litre of distilled water in a volumetric flask.
iv. Burette with stand
v. Conical flask
vi. 5 ml pipette
vii. 25 ml measuring cylinder
viii. Funnel
ix. Milk sample

## Procedure:

i. A 50 ml conical flask was weighed and 1 ml supplied milk was taken. Then the conical is again weighed to get the weight of the supplied milk.
ii. $\quad 25 \mathrm{ml}$ of distilled water and 4 ml of 2 M NaOH was added to it.
iii. Then 2-3 drops of calcon solution was added and mixed well. The solution will become purple colour.
iv. Titrate the solution against 0.01 M EDTA solution in a burette.
v. When purple colour is turned into blue colour that time will be the end point of the titration and the volume of EDTA used was noted in the burette.

## Observation:

| No of <br> observation | Burette reading (ml) |  | Difference | Average |
| :--- | :--- | :--- | :--- | :--- |
|  | Initial | Final |  |  |
| 1 | 15.5 | 19.5 | 4 | 4.15 |
| 2 |  | 23.19 .58 | 4.3 |  |

## Result:

Volume of EDTA required for titration is- $4.15 \mathrm{ml}=0.0041$ litre
Weight of milk- 0.98 g
So,
Calcium $(\mathrm{mg} \%)=\frac{\text { Molarity of EDTA } \mathrm{X} \text { volume of EDTA }(\mathrm{lit}) \mathrm{X} \text { Molecular weight of calcium X } 100}{\text { Weight of milk }(\mathrm{g})}$
$=\frac{0.01 \times 0.004 \times 40.078}{0.98} \times 100$
$=0.0017$ X 100
$=0.172 \mathrm{~g}$
$=172 \mathrm{mg} / 100 \mathrm{~g}$

## Interpretation:

Calcium level of Amul milk is $102 \mathrm{mg} / 100 \mathrm{ml}$. Supplied sample contain $183.5 \mathrm{mg} \%$ calcium. So, supplied sample contain $172 \mathrm{mg} \%$ calcium. So, this value is higher than the normal value.

## 2. Estimation of iron in food

Iron is an important element in our diet. It is used in the manufacture of the oxygen carrying proteins, hemoglobin and myoglobin. Although considered a trace mineral (one that is needed in relatively small quantities, diets lacking iron can contribute to the deficiency condition known as anemia.

In this analysis the iron present in a food sample is extracted to form a solution containing Fe $3+$ (Ferric ions. To make the presence of these ions in solution visible, thiocyanate ions are added. These react with the $\mathrm{Fe} 3+$ ions to form a blood red colour complex.
$\mathrm{Fe}^{3+}+\mathrm{SCN}^{-} \longrightarrow(\mathrm{FeSCN})^{2+}$
By comparing the intensity of the colour of this solution with the colours of a series of standard solutions, with known $\mathrm{Fe} 3+$ concentrations, the concentration of iron in food sample may be determined. This technique is called colorimetry.

## Equipment:

- Filter paper
- Funnel
- Beaker
- Test tubes
- Ring stand
- Burner
- Spectrophotometer/ Colorimeter

## Materials:

- Distilled water
- Fecl3 solution- 0.001 M
- KSCN
- HCL

## Procedure:

## Preparation of standard solution:

- Three stock solutions were made ready before the experiment and were stored in 500 ml standard flask.
- Firstly, $0.001 \mathrm{M} \mathrm{Fecl}_{3}$ stock solution was prepared by adding approximately 0.162 g Fecl3 in 500 ml of distilled water followed by the addition of 5 ml concentrated HCL. The contents were diluted to 1 liter and were mixed well before being transferred to a standard flask.
- Secondly, 1.5 M KSCN solution was prepared by adding approximately 36.375 g of KSCN in 500 ml ditilled water. The contents were mixed well before being transferred to standard flask. This solution was made on the basis of colorimetry involved in the analysis and used till the end of the experiment.

## Preparation of sample:

- $\quad 1-15 \mathrm{~g}$ of the edible portion of food was weighed. (Here 1 g of food was taken)
- They were finely chopped for the purpose of ashing.
- Then heated in a stainless steel over a hot induction plate at $200-240^{\circ} \mathrm{c}$.
- The heating time varied depending on the amount of sample and the rate at which the sample is burned to ash.
- The sample were heated till a greyish ash were observed and then they were powdered using a grinder.
- After that the sample were cooled, they were transferred to a small beaker of 100 ml capacity and the iron in the ash was dissolved in $10-30 \mathrm{ml}$ of 2 M HCL . The ash solution was stirred using a glass stirring rod for about 15 minutes and then filtered. Then 5 ml of 1.5 M KSCN was added to it ( 10 ml was used in this method).
- The absorbance was measured at 480 nm .

## Calibration curve:

Seven standard solutions were prepared each having a molarity of $0.5 \times 10-4 \mathrm{M}, 1 \times 10-4 \mathrm{M}$, $1.5 \times 10-4 \mathrm{M}, 2 \times 10-4 \mathrm{M}, 2.5 \times 10-4 \mathrm{M}, 3 \times 10-4 \mathrm{M}$ and $4 \times 10-4 \mathrm{M}$. The first solution was prepared by diluting 0.5 mL of $0.001 \mathrm{M} \mathrm{FeCl3}$ solution with 9.5 mL of 2 M HCl solution. Similarly, the corresponding solutions are made by diluting $1 \mathrm{~mL}, 1.5 \mathrm{~mL}, 2 \mathrm{~mL}, 2.5 \mathrm{~mL}, 3$ mL and 4 mL of 0.001 M FeCl 3 solution to 10 mL by 2 M HCl solution. After this, 5 mL of 1.5 M KSCN was added to each of the solution and mixed by swirling the test tubes. This step diluted the 10 mL solution to 15 mL causing the concentration to decrease by $2 / 3 \mathrm{rd}$ of its original molarity value. Thus, the values read by the spectrophotometer were for two-thirds of the actual concentration. After adding KSCN, the absorbance was measured immediately because absorbance value can be affected as the colour of the solution fades within 15-20 minutes. 2 M HCl was used as the blank. Using these solutions, the concentration vs absorbance curve was plotted.

## Flow chart:

- First solution was prepared by diluting 0.5 ml of $0.001 \mathrm{M} \mathrm{Fecl3}$ with 9.5 ml of 2 M HCl solution. So, it is $0.5 \times 10-4 \mathrm{M}$
- Similarly, 1 ml of Fecl 3 with 9 ml of HCl was added $\left(1 \times 10^{-4} \mathrm{M}\right)$.
- $\quad 1.5 \mathrm{ml}$ of Fecl 3 with 8.5 ml of HCl was added $\left(1.5 \times 10^{-4} \mathrm{M}\right)$.
- $\quad 2 \mathrm{ml} \mathrm{Fecl} 3$ with 8 ml HCl was added ( $2 \times 10-4 \mathrm{M}$ ).
- $\quad 2.5 \mathrm{ml} \mathrm{Fecl3}$ with 7.5 ml of HCl was added $\left(2.5 \times 10^{-4} \mathrm{M}\right)$.
- $\quad 3 \mathrm{ml}$ fecl 3 with 7 ml HCl was added ( $3 \times 10-4 \mathrm{M}$ ).
- $\quad 3.5 \mathrm{ml} \mathrm{Fecl3}$ with 6.5 ml HCl was added $\left(3.5 \times 10^{-4} \mathrm{M}\right)$.
- $4 \mathrm{ml} \mathrm{Fecl3}$ with 6 ml HCl was added $\left(4 \times 10^{-4} \mathrm{M}\right)$.
- After this 5 ml of 1.5 m KSCN was added to each solution and mixed well.
- $\quad 2 \mathrm{M} \mathrm{HCl}$ was used as blank
- Absorption was taken at 480 nm .

## A. Concentartion of Fe on standard solution

| Fecl3 $(\mathrm{ml})$ | Absorbance | Concemtration of Iron $(\mathrm{mg})$ |
| :--- | :--- | :--- |
| 0.5 | 0.34 | 0.162 |
| 1.0 | 0.74 | 0.324 |
| 1.5 | 1.05 | 0.486 |
| 2.0 | 1.39 | 0.648 |
| 2.5 | 1.69 | 0.81 |
| 3.0 | 2.0 | 0.972 |
| 3.5 | 2.32 | 1.134 |

## B. Sample and its iron concentration

| Name of Sample | Absorbance | Concentration of Iron <br> from plotted graph | Iron (In 100g) |
| :---: | :---: | :---: | :---: |
| Cowpea seed | 0.10 | 0.05 mg | 5 mg |
| Jackfruit seed | 0.11 | 0.06 mg | 6 mg |
| Tamarind seed | 0.12 | 0.07 mg | 7 mg |
| Turmaric powder | 0.49 | 0.22 mg | 22 mg |
| Cauliflower green | 0.68 | 0.3 mg | 30 mg |

## Interpretation:

According to colorimetric method of iron estimation highest iron containing food stuff is cauliflower greens.

## 3. Estimation of Ascorbic acid in lemon

Vitamin C or ascorbic acid standard in metaphosphoric acid is titrated against 2,6 dichlorophenol indophenol salt. This salt is blue in colour in alkaline medium and became pink in acidic medium. Pink colour indicates the complete oxidation of ascorbic acid. The dye in this titration is coloured in the oxidised form and colourless in reduced form. Ascorbic acid is a strong reducing agent because of which it reduces the dye and converted to dehydro ascorbic acid (Oxidised form).

## Requirements:

i. 2,6, dichlorophenol indophenol was taken and added with 150 ml of distilled water. Then 42 mg of NaHCO 3 was added to it. Then 50 ml of distilled water was added with it or volume upto 200 ml with distilled water.
ii. 6\% meta phosphoric acid
iii. 50 mg of ascorbic acid was added with 100 ml of $6 \%$ meta phosphoric acid and the concentration is $50 \mathrm{mg} \%$.
iv. 50 ml conical flask
v. 10 ml pipette, burette and beaker
vi. Measuring cylinder
vii. Lemon juice

## Procedure:

i. $\quad 1 \mathrm{ml}$ of lemon juice was taken in a 50 ml conical flask. Similarly, 1 ml of standard Vitamin C was taken in a conical flask
ii. $\quad 9 \mathrm{ml}$ of $6 \%$ metaphosphoric acid was added to each conical flask
iii. Both standard vitamin C and sample was titrated against the 2, 6, dichlorophenol indophenol in a burette
iv. Volume of the dye was recorded when a light pink colour persists for 30 seconds.
v. The total procedure of titration was repeated for 3 times.

## Observation of the sample:

| No of <br> observation | Burette reading (ml) |  | Difference(ml) | Average (ml) |
| :--- | :---: | :--- | :---: | :---: |
|  | Initial | Final |  |  |
| $\mathbf{1}$ | $\mathbf{0}$ | $\mathbf{3 . 3}$ | $\mathbf{3 . 3}$ | $\mathbf{3 . 1 5}$ |
| $\mathbf{2}$ | $\mathbf{3 . 3}$ | $\mathbf{6 . 3}$ | $\mathbf{3}$ |  |

Observation of the standard vitamin C:

| No of <br> observation | Burette reading (ml) |  | Difference(ml) | Average (ml) |
| :--- | :---: | :--- | :---: | :---: |
|  | Initial | Final |  |  |
| 1 | 0 | 2.5 | 1.5 | 1.5 |
| 2 | 2.5 | 5 | 1.5 |  |

## Result:

Titration value of standard vitamin C is 2.5 ml .
Titration value of lemon juice sample is 3.1
1 ml standard vitamin $C$ solution contain 0.5 mg vitamin C
So, 2.5 ml dye reduces 0.5 mg of vitamin C
1 ml dye reduces $0.5 / 2.5 \mathrm{mg}$ vitamin C
3.15 ml dye reduces $0.5 / 2.5 \mathrm{X} 3.15$

$$
=0.63 \mathrm{mg}
$$

As 1 ml of lemon juice was taken so 1 ml lemon juice contain 0.63 mg vitamin C ,
So, 100 ml lemon juice contain $0.63 \times 100=63.0 \mathrm{mg}$

## Interpretation:

The supplied lemon juice contains $63 \mathrm{mg} \%$ Vitamin C. As per the standard value available at the book of C Gopalan, the vitamin C content in lemon juice is $40 \mathrm{mg} \%$. So the supplied lemon juice contain a high amount of vitamin $C$ which may be due to the variety or the change in climate for cultivation of vitamin C .

## 4. Estimation of food Composition

Estimation of food composition can be done by estimation of any type of nutrients in foods like the other methods. As for example total carbohydrate content in foods, lactose in milk etc may be used.
